SUMMARY

Product-focused Senior Backend Engineer with 7+ years of experience in building scalable microservices and high-performance systems. Strong advocate of clean code, TDD, and agile practices, with a passion for product ownership and measurable business impact.

WORK EXPERIENCE

Product Engineer — Invygo — Dubai, UAE — Onsite Oct 2024 – Present

- Reduced rejection rates by 20% by introducing a smart listing system.
- Conducted multiple experiments to solve supply challenges, helping achieve 85% of quarterly targets.
- Integrated Honeycomb and implemented alerting systems, reducing MTTD from 4 hours to 10 minutes and MTTR from 8 hours to 1 hour.
- Introduced unit and integration testing frameworks, significantly reducing production bugs and improving overall quality.
- Launched a pre-booking feature in just two days, helping meet Q3 booking goals and resolve idle car issues.
- Fixed recurring payment and method issues, increasing successful recurring collections by 15%.
- Built the in-app Stories feature, increasing engagement by 20%.
- Collaborated closely with Product teams on ideation and solution design for better user experience.
- Utilized OpenAI image recognition tools to enhance KYC-related initiatives.

Tech Stack: Node.js, TypeScript, NestJS, Kotlin, React.js, MySQL, MongoDB, AWS, Honeycomb, CloudWatch

Senior Software Engineer — Equal Experts — India — Hybrid Jan 2023 – Sep 2024

Client – Network International – Payment Gateway

- Served as Tech Lead for Apple Tap to Pay, enabling Apple devices to receive payments like POS terminals.
- Built Kotlin-based microservices using the Quarkus framework, integrated with payment systems and HSM services for secure encryption/decryption.
- Managed communication with clients, external vendors, Apple, and mobile teams to align solutions and finalize contracts.
- Set up environments, certificates, and profiles, and managed end-to-end releases for the first client deployment.
- Delivered project handover to client teams, onboarding developers and documenting the full system.
- Applied hexagonal design patterns for extensibility, and implemented unit/integration testing (JUnit, Cucumber) for near-zero issues.

Tech Stack: Kotlin, Java - 11/17, Quarkus, SpringBoot, MySQL, Cucumber, JUnit, Node.js, React.js, AWS, Kibana, Grafana, PagerDuty, MongoDB

Senior Software Engineer — ThoughtWorks — India — Hybrid Oct 2022 – Jan 2023

Client – Daimler (Mercedes-Benz) – One Touch Retail

- Served as Tech Lead, building a GDPR Audit Automation tool using Kotlin and scripting utilities.
- Optimized reporting tools, reducing refresh time from six hours to near real-time updates.
- Developed and maintained customer and booking-related features in Kotlin and Clojure services, using GoCD for CI/CD and PACT for contract testing.

- Collaborated across domain-driven teams, adapting to diverse business areas and client requirements.

Software Engineer — Thoughtworks — India — Hybrid Oct 2018 – Oct 2022
Client – Falabella – E-Commerce

- Led rapid development of a Q-Management MVP during COVID, delivered in just 7 days using Node.js & React.js to manage in-store crowds.
- Collaborated with stakeholders for requirement gathering, design, and iterative improvements.
- Contributed to revamping the Search Listing Page, migrating from legacy systems to microservices.

Client – Evry – Banking

- Contributed to an organization-wide transformation initiative improving delivery speed and engineering processes.
- Paired with client developers and led agile practice sessions to enhance quality and collaboration.

L1 Engineer — Wipro Technologies — India — Onsite Aug 2017 – Sep 2018
Client – Tata Power IT

- Provided remote desktop support as a Support Engineer, handling customer phone calls and queries while working closely with server and backup teams to resolve issues. Took remote sessions to install tools on customer machines and offered L1 support during incidents. Collaborated with onsite engineers to ensure quick, smooth, and effective resolutions for customers.

SKILLS

Programming Languages	Node.js, TypeScript, Kotlin, Java, Clojure
Frameworks	NestJS, Hapi.js, Spring Boot, React.js, Quarkus
Databases	MongoDB, MySQL, PostgreSQL, Redis
Processes	Agile, TDD, Domain-Driven Design, CI/CD, Stakeholder Communication, Requirement Gathering
Tools & Technologies	AWS, RabbitMQ, Kibana, Grafana, Honeycomb, Alerting & Monitoring, Debugging, Mentoring, Onboarding, Knowledge Sharing, Pair Programming, Clean Code, Hexagonal Architecture, Microservices, Contract Testing, AI Tools (ChatGPT, OpenAI API Integrations), Checkout Payments, REST APIs

EDUCATION

Bachelor of Computer Applications
Alagappa University, Tamil Nadu, India (80%)

Computer Engineering, Diploma
Guru Nanak Dev Institute of Technology, Delhi, India (80%)
